Professional Summary

PhD researcher and AI automation consultant who helps companies solve real business problems with artificial intelligence. 5+ years managing construction projects in the UAE, now building production AI systems that automate communication, content creation, and data collection for companies in China. I don't just build tools — I identify what's costing your team time and money, then design and deploy AI solutions that eliminate that cost. The result: teams focus on high-value work while AI handles the repetitive, time-consuming tasks 24/7.

What I Can Do For Your Company

AI-Powered Business Automation

- **24/7 Autonomous Communication** — Deploy AI agents that handle customer messages, voice notes, and documents across Feishu, WeChat, Douyin, and international platforms. Your team wakes up to completed work, not a backlog of messages.
- **Content Production in Minutes, Not Days** — Full video production pipeline: script generation, voice cloning in any language, cinematic background music, footage sourcing, and automated captions. What takes a team a week, the system produces in under an hour.
- **Market Intelligence on Autopilot** — Automated data collection across 7 Chinese social platforms (Douyin, Xiaohongshu, Bilibili, Kuaishou, Weibo, Tieba, Zhihu) for competitor analysis, trend monitoring, and audience research.
- **Voice Cloning & Multilingual Content** — Clone any team member's voice from a 30-second audio sample. Generate voiceovers in Chinese, English, Japanese, Korean, and Cantonese without hiring voice actors.
- **Browser Automation** — Autonomous web interaction for form filling, data extraction, quality testing, and workflow automation — with built-in captcha handling and crash recovery.
- **Knowledge Management Systems** — Build company-wide knowledge bases that auto-organize documents, meetings, and decisions into a searchable, cross-referenced system that survives employee turnover.

Work Experience

AI Automation Consultant

Independent Consultant — AI Agent Systems & Business Automation

2024 — Present | China

- Deployed autonomous AI agents for business clients handling communication across Feishu, WeChat, Douyin, and Telegram
- Built video generation pipelines reducing content production time from days to under an hour
- Implemented multi-platform data collection systems for competitor analysis and market research
- Configured enterprise voice cloning for automated multilingual content generation
- Designed knowledge management systems with automated ingestion for company knowledge retention

Consultant Project Engineer

Autocad Engineering Consultancy

Dec 2021 — Apr 2023 | Fujairah, UAE

- Managed large-scale construction projects ensuring safety compliance and on-time delivery
- Supervised work crews, monitored equipment use, and maintained quality standards
- Coordinated construction documentation — site inspection reports, material inspections, compliance records

Assistant Project Manager

National Building Contracting LLC

May 2022 — Aug 2022 | Fujairah, UAE

- Contributed to planning and design of large infrastructure projects
- Conducted onsite evaluations and coordinated logistics between contractors, clients, and engineers

Special Event Assistant

Dalian University of Technology

Apr 2023 — Sep 2024 | Dalian, China

- Organized cultural events and represented the university at international forums
- Awarded 3rd Place in National Content Creation (Dalian)

Education

PhD in AI Construction Automation

Dalian University of Technology

Oct 2023 — Present | Dalian, China

Research: AI agents for construction workflow automation, resource planning, cost forecasting, and sustainability tracking

M.Sc. Civil Engineering Management

Dalian University of Technology — Grade: 79% | EQF Level 7

Oct 2020 — Jun 2023 | Dalian, China

B.Sc. Civil Engineering

University of Faisalabad — Grade: 3.29 | EQF Level 6

Aug 2015 — Mar 2019 | Pakistan

Published Research

- **"Explainable Machine Learning for Predicting Building Energy Performance and Sustainability Certification in Construction Megaprojects"** — Published in *Energy and Buildings* (ScienceDirect, 2026). Cited by 1. View on SSRN
